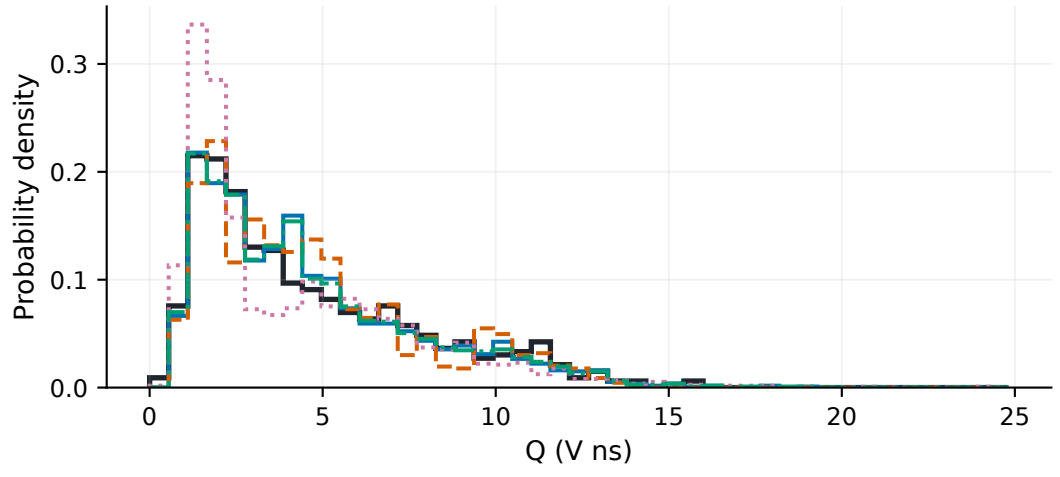
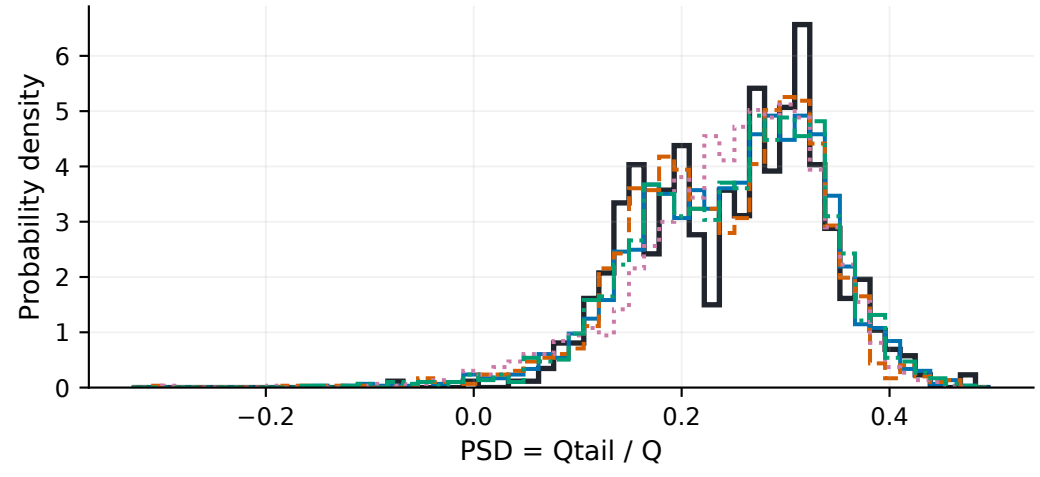
N01 fixed endpoints: complete raw populations

REAL — Full — Deterministic U-Net — Simple — Full / uniform population

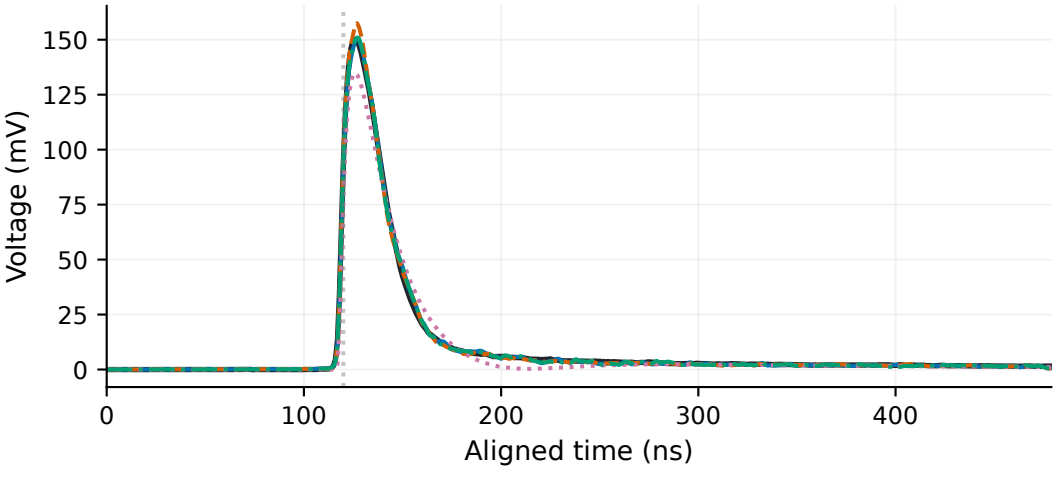
a Window charge



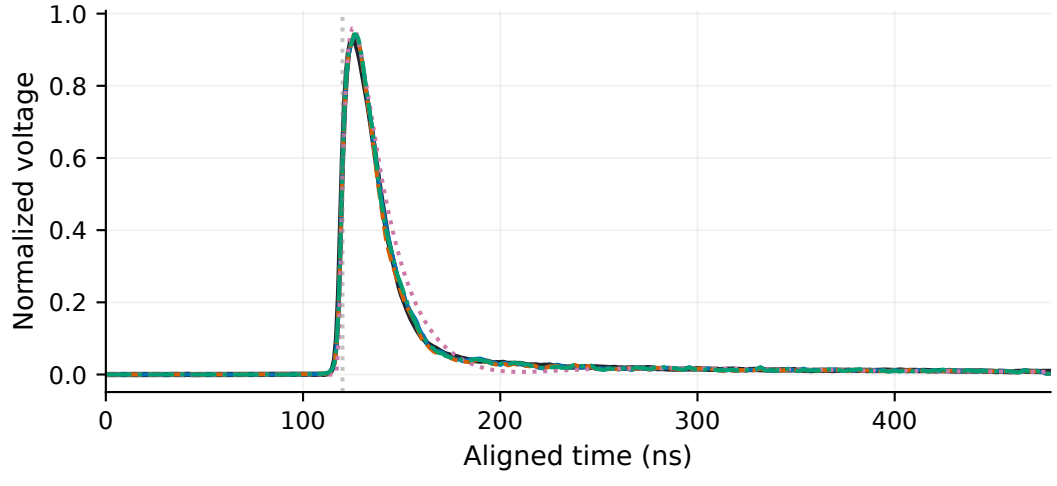
b PSD, including observed tails



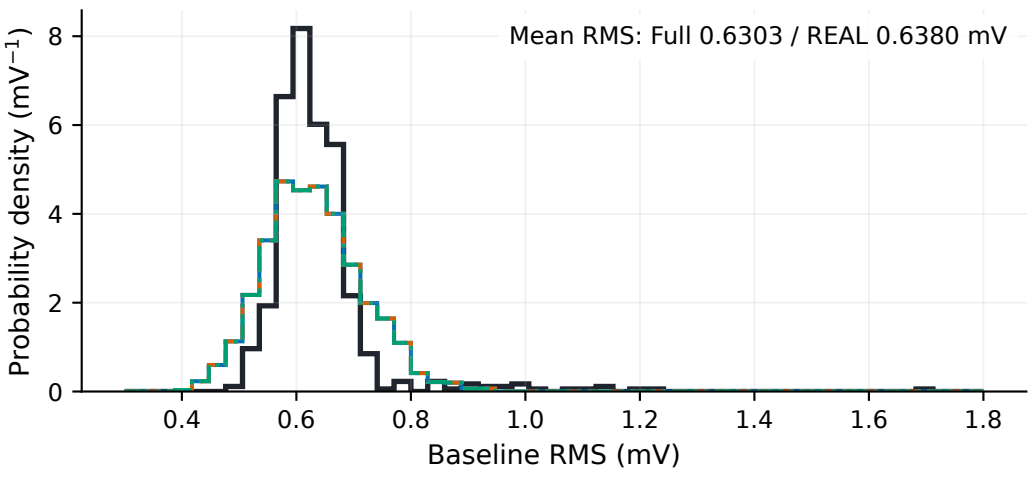
c Full mean voltage



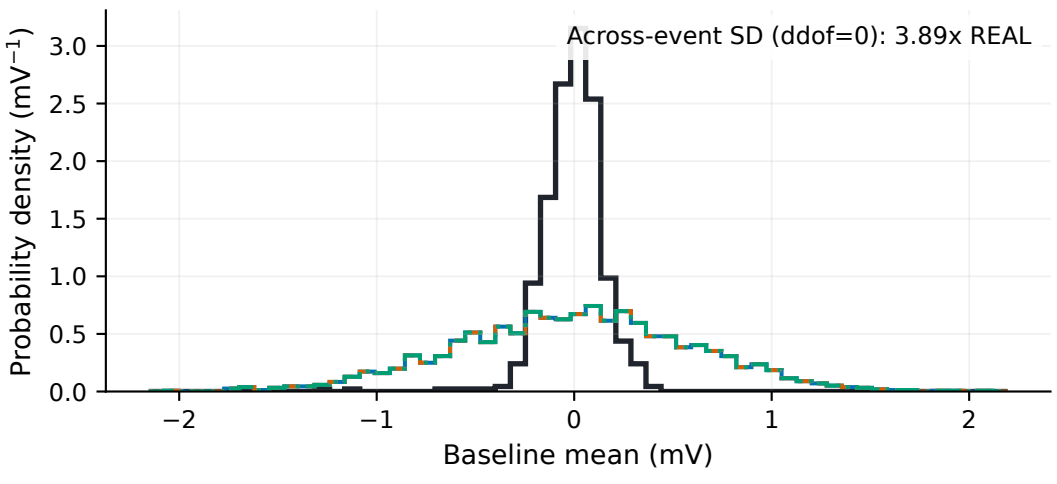
d Full peak-normalized mean shape



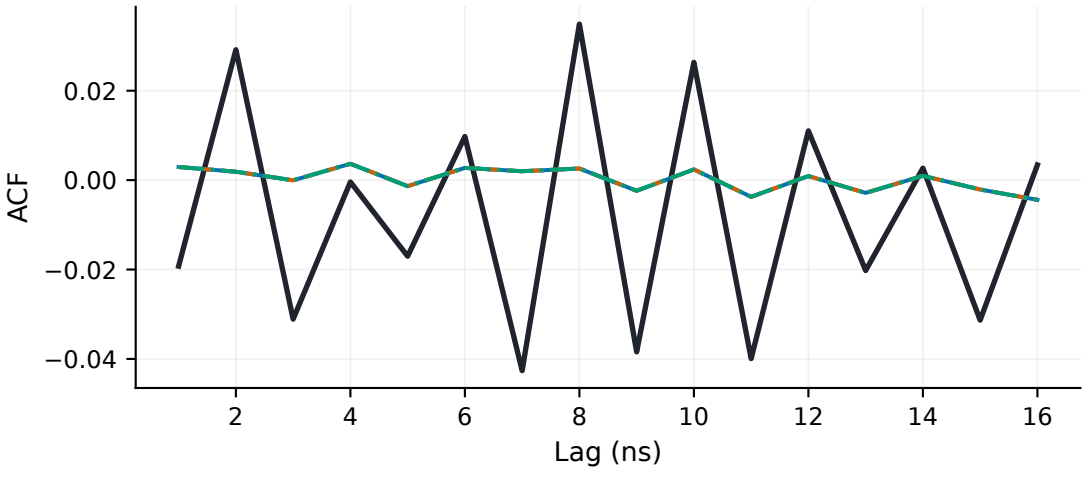
e Baseline RMS per response



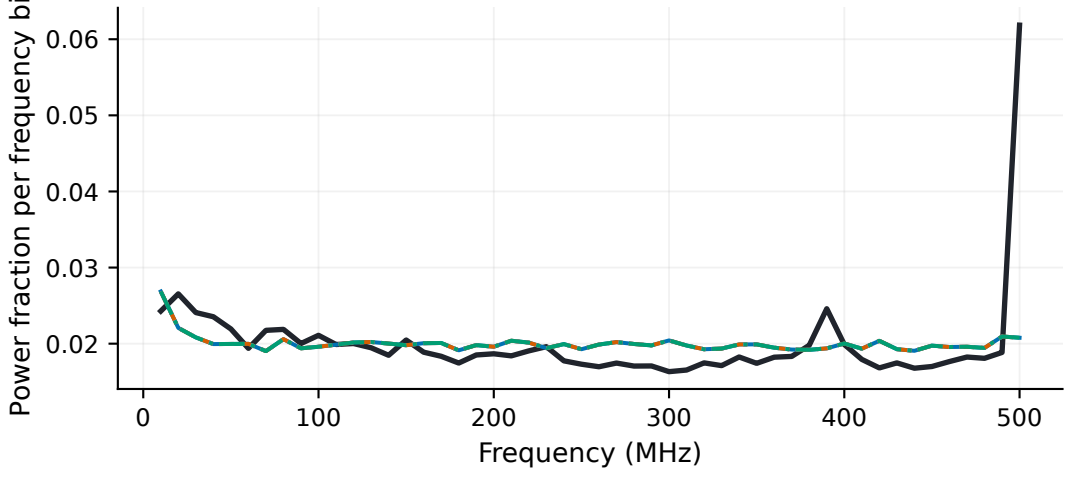
f Baseline mean per response



g Mean baseline autocorrelation



h Normalized mean baseline FFT power



Raw: 512 SOURCE parents x 4 draws = 2048 responses; 599 REAL parents. Shared generated baselines are identical across all four arms.
Baseline-mean SD uses ddof=0; one historical REAL acquisition. Frozen waveform/shape summaries and noise features are used without refitting.
