044 fixed-population mechanism diagnostic | seed0/fast for conditional curves
Width already depends on mean content
FWHM_ns
SOURCE A0 canonical-Q bin mean (V ns)
Mean
+ M0 random
Native ADC
Peak changes from random/noise are small
peak_voltage_V
SOURCE A0 canonical-Q bin mean (V ns)
Mean
+ M0 random
Native ADC
Opposite conditional width trends
Mean FWHM (ns)
Native output-Q bin (descriptive comparison)
Generated
REAL
All tail cost appears at peak reselection
Tail W1 increase vs042 (V ns)
